DETAILED ACTION

Specification

1. The specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Drawings

2. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the "piezoelectric actuator being disposed outside the hollow body" must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will

10/538,033

Art Unit: 2834

be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.
- 3. Claim 29 is rejected under 35 U.S.C. 102(a) as being anticipated by Jovovic et. al. (WO03/033933A1 [US 2004/0195060 for translation purposes]).

Jovovic discloses an actuator unit (1) having an elongated hollow body (12) which is elastically embodied and which prestresses a piezoelectric actuator (2), the hollow body (12) having a plurality of recesses (14) and having a joint (not shown) extending parallel to its longitudinal axis (16, a bridge piece (not identified) between each pair of adjacent recesses (14), the hollow body (12) having a first end (upper end) and a second end (lower end), and the recesses adjacent to the joint being smaller than the rest of the recesses (see figure 2, recesses along line 16 are smaller than the rest of the recesses 14).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Application/Control Number:

10/538,033 Art Unit: 2834

4. Claim 30-56 are rejected under 35 U.S.C. 103(a) as being unpatentable over Jovovic in view of Frank (US 6681462).

Jovovic discloses the claimed invention as disclosed in item 3, where the actuator unit comprises recesses.

However, Jovovic is silent regarding the dimensions of the bridge pieces formed between the recesses.

Frank discloses that the shape and the dimensions of the recesses could be modified to meet the specific requirements of the application. Specifically, in column 4, line 38- Frank discloses that the length and number of slots are such that the elasticity of the hollow body is matched to the desired manner of operation of the system. Therefore, it would have been obvious at the time of the invention was made to select the dimensions of the slots and the surrounding portions to obtain the desired characteristics of the hollow body.

Regarding claim 31-32, 38-42, Jovovic discloses the invention as explained above, but fails to disclose the specific dimensions of the recesses. It would have been obvious to one having ordinary skill in the art at the time of the invention was made to modify Jovovic's invention and disclose specific dimensions for the recesses, since it has been held that discovering an optimum value of a result effective variable involves only routine skill in the art. In re Boesch, 617 F.2d 272, 205 USPQ 215 (CCPA 1980). As explained above, it would have been obvious at the time of the invention was made to select the dimensions of the slots and the surrounding portions to obtain the desired characteristics of the hollow body.

Regarding claims 43-48, Jovovic discloses each claimed limitation.

Art Unit: 2834

Regarding claim 50, it should be noted that the method of making the device does not differentiate from the prior art structure.

Regarding claims 50-54, Jovovic discloses the cover plates on the end faces.

Regarding claim 55, Jovovic's invention has the purpose of prestressing the actuator, therefore the limitation is considered to be met.

Regarding claim 56, it is the Examiner's position that having the actuator disposed outside the hollow body (or the hollow body surrounding the actuator) does not differentiate the invention from the prior art. However, it should be noted that this feature is not shown in the drawings.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See PTO-892.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jaydi A. San Martin whose telephone number is 571-272-2018. The examiner can normally be reached on M-Th 9-7.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Darren E. Schuberg can be reached on 571-272-2044. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
